

# How to generate your Ethereum ERC-20 compatible wallet address?

In order to receive your AMBT tokens you will be asked to enter your unique wallet address in your dashboard.

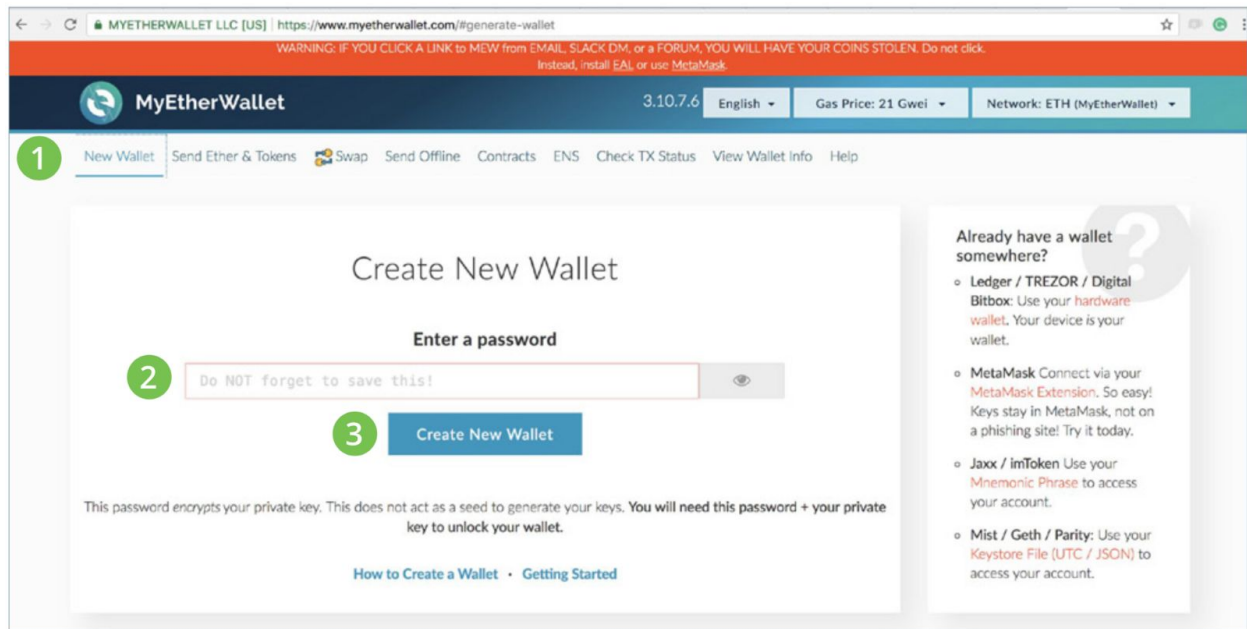

We recommend using [MyEtherWallet](#) but you may also use other native Ethereum wallets as long as they are ERC-20 compatible, such as Metamask, Mist or imToken.

**We do not recommend sending your AMBT tokens directly to your exchange** as they might get lost and we will not be able to recover them.

1. Go to [MyEtherWallet.com](#) and click on “New wallet”.

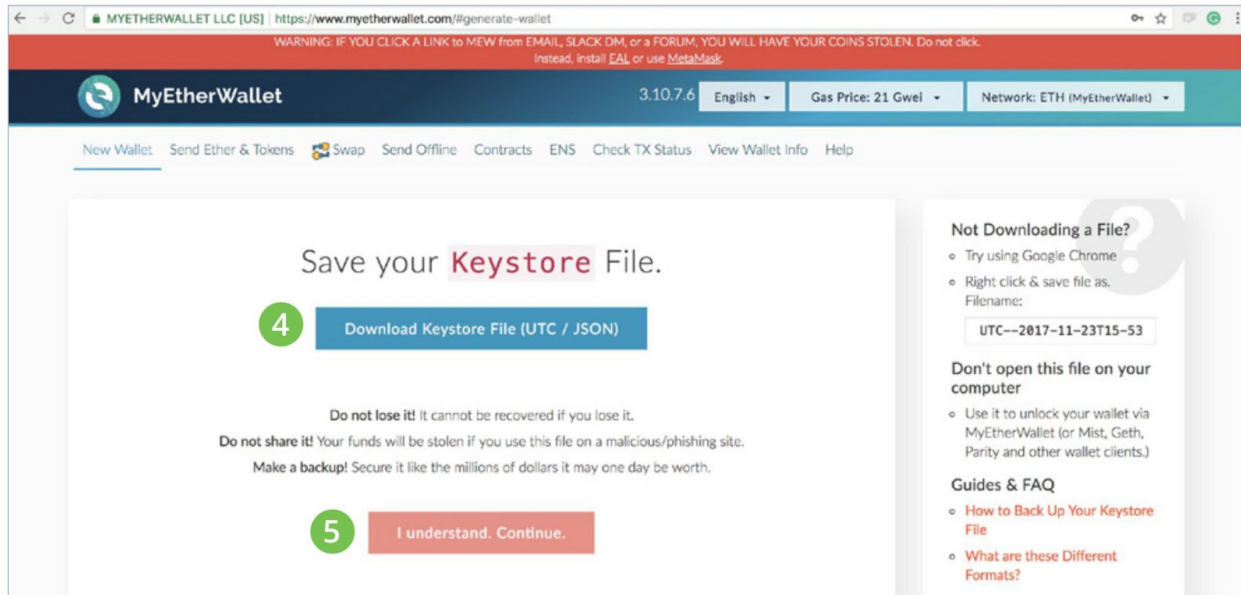

2. Enter a password you will remember.

3. Click on “Create new wallet”.

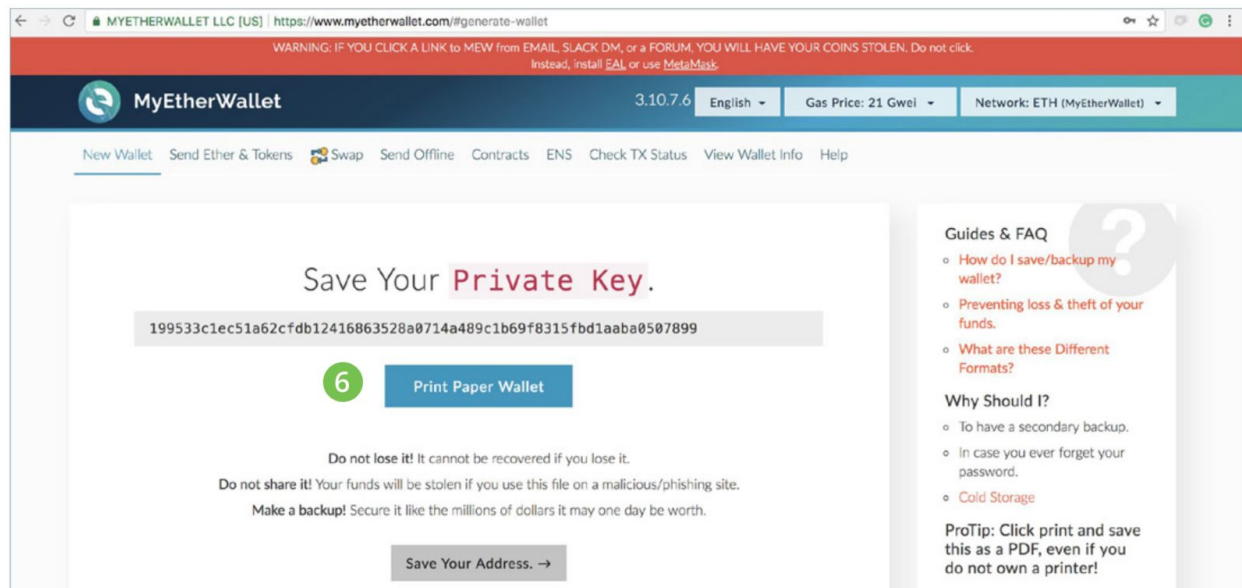

4. Save your “Keystore” file onto your computer and keep it safe.

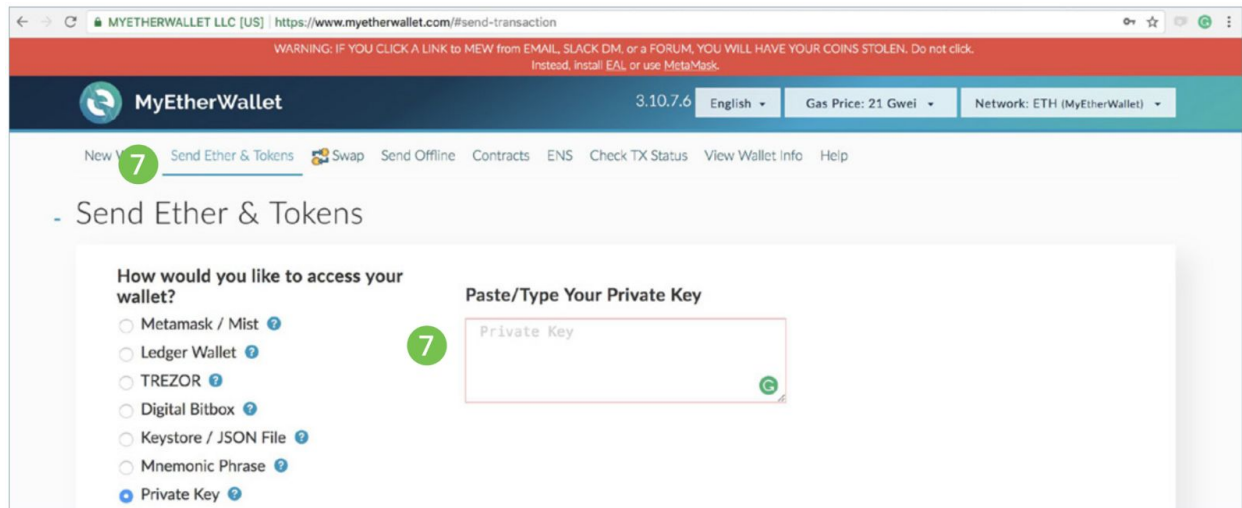

5. Click on “I understand. Continue”.

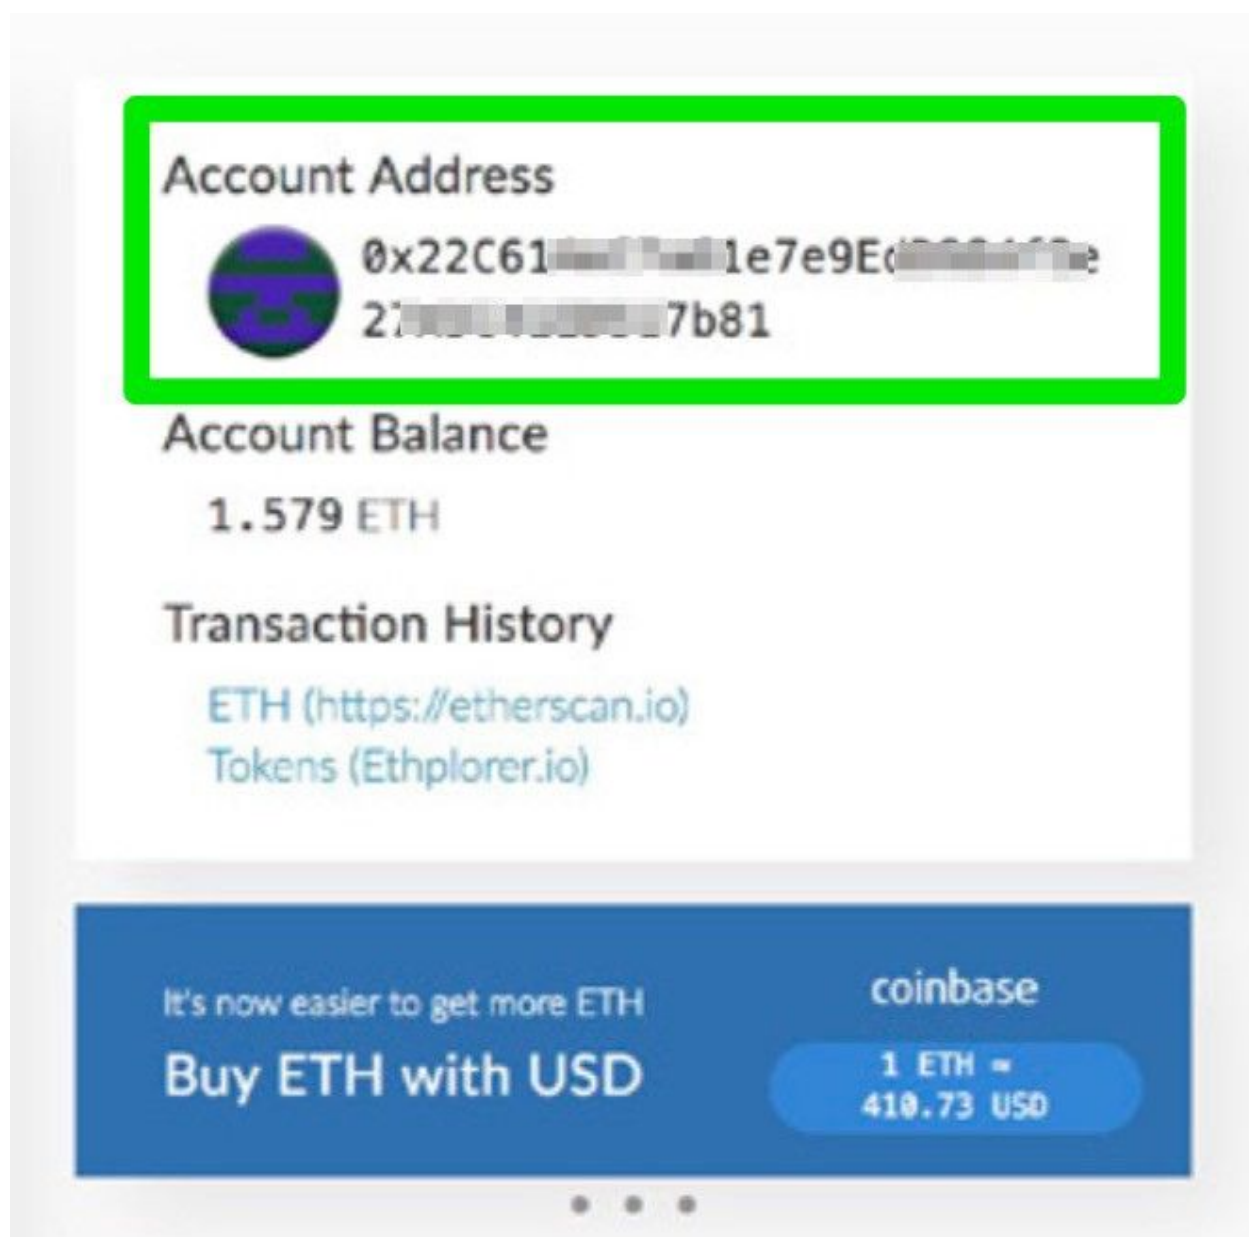

6. Print out your “Private key” or, alternatively, you can write it down on a piece of paper or save it onto a hard drive or USB stick.

7. In the next step, follow instructions to unlock your wallet and see your address. You can also click “Send Ether & Tokens” to unlock it.

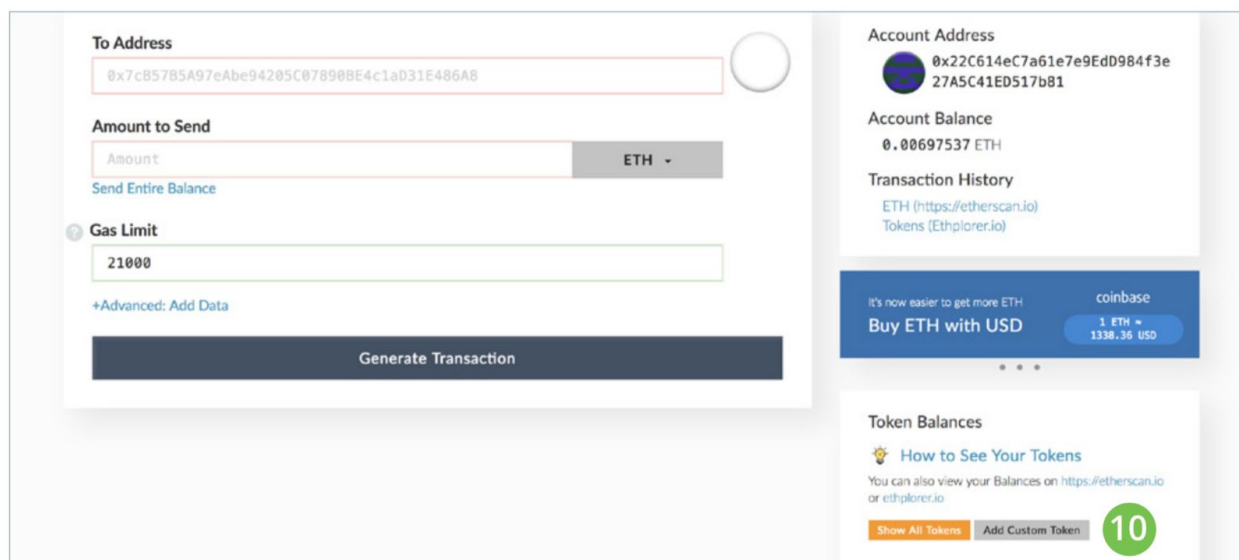

8. Scroll down to find your “Account address”. It’s a long string of numbers and letters. This is the address you will need to copy and paste in your dashboard.

9. Go to your dashboard and enter your Account address (the one you copied in step 8).

10. To be able to see your AMBT tokens in MyEtherWallet, you must add the AMBT token details in the same “Send Ether & Tokens” page where it says, “Token Balances”.

11. Click on “Add custom token” and enter the following details:

*Contract address:* 0x3d2B62aD28A7A11824Db8d64D170843e3b89F6Ec

*Token symbol:* AMBT

## Decimals: 18

The screenshot shows a web interface with two main panels. The left panel is titled "Send entire balance" and contains a "Gas Limit" input field with the value "21000". Below the input field is a link "+Advanced: Add Data" and a dark blue button labeled "Generate Transaction". The right panel is titled "ETH (https://etherscan.io) Tokens (Ethplorer.io)" and features a "Buy ETH with USD" button with a "coinbase" logo and a price of "1 ETH = 1338.36 USD". Below this is a "Token Balances" section with a "How to See Your Tokens" link and a note: "You can also view your Balances on https://etherscan.io or ethplorer.io". There are two buttons: "Show All Tokens" and "Add Custom Token". The "Add Custom Token" section includes a "Token Contract Address" input field with the value "@ewsupport.eth", a "Token Symbol" input field, and a "Decimals" input field. A green circle with the number "11" is positioned to the left of the "Token Symbol" input field. At the bottom of the "Add Custom Token" section is a "Save" button.

12. Click “Save”.

We start the token distribution on April 10th 2018.

You will be able to see your AMBT tokens in your MyEtherWallet account if you have completed the steps above and, if applicable, shortly after completing the KYC/AML process.
